****All 3M films block up to 99% of harmful UV rays that come into your home. UV rays are the largest cause of fading. 3M window film will help extend the life and value of your flooring and furnishings by dramatically slowing down the time in which fading can occur. Fading will not be eliminated.****

Causes of Fading

****Only blinds and/or curtains will provide complete privacy, and completely block the light from coming in through your windows.****
